#### 0. INTRODUCTION

This User Manual has been developed by the SMDG User Group for Shipping Lines and Container Terminals, a "Global User Group" under the auspices of UN/CEFACT.

3 March 2003 Message : COARRI

Version : 2.0 / D00B

This User Manual is based upon the UN/EDIFACT D.00B directory and the ITIGG document "Principles and Rules for the implementation of transport EDI messages - Transport Equipment Movements – Maritime-related container messages", version 1.3.1, dated September 1996.

This User Manual provides guidance as to the recommended usage of codes, gualifiers, data elements, composites, segments and groups of segments in the D.00B COARRI message. The intention is to assist developers to ensure consistent use of the COARRI message throughout the worldwide trade and transport community.

#### 1. GENERAL

#### **Formal Definition**

"A message by which the container terminal reports that the containers specified have been discharged from a seagoing vessel (discharged as ordered, overlanded or shortlanded), or have been loaded into a seagoing vessel. This message is part of a total set of container-related messages. These messages serve to facilitate the intermodal handling of containers by streamlining the information exchange. The business scenario for the container messages is clarified in a separate document, called "Guide to the scenario of EDIFACT container messages".

The COARRI message is used to transmit a confirmation that containers have been loaded onto or have been discharged from a seagoing vessel. This message is commonly sent by the terminal operator handling the vessel to the shipping line (or it's agent).

In addition to containers loaded or discharged, the COARRI message may also be used to confirm that containers have been shifted on board the vessel or that containers have been discharged and reloaded (restowed) onto the vessel.

#### 2. STATUS INDICATORS AND USAGE INDICATORS

#### **Status Indicators**

March 2003 Message: COARRI 4

Version : 2.0 / D00B

Status Indicators ("M" and "C") form part of the UN/EDIFACT standard and indicate a minimum requirement to fulfil the needs of the message structure. They are not adequate for implementation purposes. The Status Indicators are:

Value Description Mandatory Μ

> The entity marked as such must appear in all messages, and apply to these messages as well as to any associated implementation guidelines

(and consequently is also a Usage Indicator).

С Conditional

The entity is used by agreement between trading partners.

#### **Usage Indicators**

Usage Indicators are implementation-related indicators that further detail the use of "Conditional" Status Indicators. Usage Indicators are applied at all levels of the guidelines and shown adjacent to data items such as segment groups, segments, composite data elements and simple data elements. They dictate the agreed usage of the data items or entities. The Usage Indicators are:

Value Description Mandatory Μ

Indicates the item is mandatory in the UN/EDIFACT message.

R Required

Indicates the item must be transmitted in this implementation.

D Dependent

> Indicates that the use of the item is depending on a well-defined condition or set of conditions. These conditions must be clearly specified in the relevant implementation guideline.

0 Optional

> Indicates that this item is at the need or discretion of both trading partners.

Χ Not Used

Indicates that this item is not to be used in this implementation.

Where an item within a segment group, segment or composite data element is marked with Usage Indicators "M" or "R", but the segment group, segment or composite data element has been marked "O" or "D" (or for that matter "X"), the item is only to be transmitted when the segment group, segment or composite of which it is a part, is used.

#### 3. DOCUMENT MAINTENANCE

The data content of this document has been prepared and approved by SMDG and no alteration may be made to the content of this document without reference to and approval of SMDG.

# **COARRI Container Discharge/Loading Report Message**

#### **Introduction:**

A message by which the container terminal reports that the containers specified have been discharged from a seagoing vessel (discharged as ordered, overlanded or shortlanded), or have been loaded into a seagoing vessel. This message is part of a total set of container-related messages. These messages serve to facilitate the intermodal handling of containers by streamlining the information exchange. The business scenario for the container messages is clarified in a separate document, called: 'Guide to the scenario of EDIFACT container messages'.

Segment: UNH Message Header

**Position:** 0010

Group: Level: 0

**Usage:** Mandatory

Max Use: 1

**Purpose:** A service segment starting and uniquely identifying a message. The message type

code for the Container discharge/loading report message is COARRI.

Note: Container discharge/loading report messages conforming to this document must

contain the following data in segment UNH, composite S009:

Data element 0065 COARRI 0052 D 0054 00B 0051 UN

**Comments:** 

**Notes:** Sample segment:

UNH+SN241445110001+COARRI:D:00B:UN:SMDG20'
